

# Correio AVS with Correio Name Manager

Correio leverages the United States Postal Service Address Management System (USPS AMS) database to ensure your member address records are standardized, corrected and have the correct ZIP Codes. With multiple integration points throughout the Jack Henry Symitar™ platform, Correio can also be integrated with applications which require address correction and normalization, including our CU Collect and Envoy Online Member & Loan App products and third-party on-line banking vendors.

Correio includes our proven Correio Name Manager PowerOn application at no additional charge, which allows you to update name or address changes and propagate those changes to other name records, not only on the current account, but also on other associated accounts.

## KEY FEATURES

Tight integration with your core system

Unlimited batch runs for bulk address updates

No per-address verification charges

Address normalization to USPS standards, including ZIP+4

API for your online banking vendors

Cross-account (360 View) functionality
